

# Energy Performance Certificate

Flat 3  
1, Porchester Road  
NEWBURY  
RG14 7QJ

Dwelling type: Top-floor flat  
Date of assessment: 04 February 2009  
Date of certificate: 04 February 2009  
Reference number: 8109-6445-5720-0106-5213  
Total floor area: 61 m<sup>2</sup>

This home's performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO<sub>2</sub>) emissions.

## Energy Efficiency Rating

|  | Current                 | Potential |
|--|-------------------------|-----------|
| <i>Very energy efficient – lower running costs</i> |                         |           |
| (92 plus) <b>A</b>                                 |                         |           |
| (81-91) <b>B</b>                                   |                         |           |
| (69-80) <b>C</b>                                   |                         |           |
| (55-68) <b>D</b>                                   | 55                      | 58        |
| (39-54) <b>E</b>                                   |                         |           |
| (21-38) <b>F</b>                                   |                         |           |
| (1-20) <b>G</b>                                    |                         |           |
| <i>Not energy efficient – higher running costs</i> |                         |           |
| <b>England &amp; Wales</b>                         | EU Directive 2002/91/EC |           |

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

## Environmental Impact (CO<sub>2</sub>) Rating

|   | Current                 | Potential |
|---|-------------------------|-----------|
| <i>Very environmentally friendly - lower CO<sub>2</sub> emissions</i> |                         |           |
| (92 plus) <b>A</b>  |                         |           |
| (81-91) <b>B</b>  |                         |           |
| (69-80) <b>C</b>  |                         |           |
| (55-68) <b>D</b>  |                         |           |
| (39-54) <b>E</b>  | 48                      | 51        |
| (21-38) <b>F</b>  |                         |           |
| (1-20) <b>G</b>   |                         |           |
| <i>Not environmentally friendly - higher CO<sub>2</sub> emissions</i> |                         |           |
| <b>England &amp; Wales</b>  | EU Directive 2002/91/EC |           |

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO<sub>2</sub>) emissions. The higher the rating the less impact it has on the environment.

## Estimated energy use, carbon dioxide (CO<sub>2</sub>) emissions and fuel costs of this home

|                          | Current                         | Potential                       |
|--------------------------|---------------------------------|---------------------------------|
| Energy use               | 416 kWh/m <sup>2</sup> per year | 387 kWh/m <sup>2</sup> per year |
| Carbon dioxide emissions | 4.2 tonnes per year             | 3.9 tonnes per year             |
| Lighting                 | £43 per year                    | £29 per year                    |
| Heating                  | £615 per year                   | £585 per year                   |
| Hot water                | £81 per year                    | £76 per year                    |

Based on standardised assumptions about occupancy, heating patterns and geographical location, the above table provides an indication of how much it will cost to provide lighting, heating and hot water to this home. The fuel costs only take into account the cost of fuel and not any associated service, maintenance or safety inspection. This certificate has been provided for comparative purposes only and enables one home to be compared with another. Always check the date the certificate was issued, because fuel prices can increase over time and energy saving recommendations will evolve.

To see how this home can achieve its potential rating please see the recommended measures.

Certification mark

The address and energy rating of the dwelling in this EPC may be given to EST to provide information on financial help for improving its energy performance.

For advice on how to take action and to find out about offers available to help make your home more energy efficient, call **0800 512 012** or visit [www.energysavingtrust.org.uk/myhome](http://www.energysavingtrust.org.uk/myhome)

## About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by Quidos, to a scheme authorised by the Government. This certificate was produced using the RdSAP 2005 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) (England and Wales) Regulations 2007 as amended. A copy of the certificate has been lodged on a national register.

|                                  |  |
|----------------------------------|--|
| Assessor's accreditation number: | QUID200042   |
| Assessor's name:                 | Mr Andy Guy  |
| Company name/trading name:       | Eaga Plc   |
| Address:                         | Eaga Plc, Eaga House, Archbold Terrace<br>NEWCASTLE UPON TYNE, NE2 1DB |
| Phone number:                    | 01912 473 800  |
| Fax number:                      | 0191 4424778   |
| E-mail address:                  | andrew.guy@eaga.com  |
| Related party disclosure:        |  |

## If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are as above. You can get contact details of the accreditation scheme from our website at [www.quidos.co.uk](http://www.quidos.co.uk) together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

## About the building's performance ratings

The ratings on the certificate provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 46).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at [www.communities.gov.uk/epbd](http://www.communities.gov.uk/epbd)

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings in the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

## About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple every day measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

**Visit the Government's website at [www.communities.gov.uk/epbd](http://www.communities.gov.uk/epbd) to:**

- Find how to confirm the authenticity of an energy performance certificate
- Find how to make a complaint about a certificate or the assessor who produced it
- Learn more about the national register where this certificate has been lodged
- Learn more about energy efficiency and reducing energy consumption

## Recommended measures to improve this home's energy performance

Flat 3  
1, Porchester Road  
NEWBURY  
RG14 7QJ

Date of Certificate  
Reference Number

04 February 2009  
8109-6445-5720-0106-5213

## Summary of this home's energy performance related features

The following is an assessment of the key individual elements that have an impact on this home's performance rating. Each element is assessed against the following scale: Very poor / Poor / Average / Good / Very good.

| Element               | Description                                    | Current performance |               |
|-----------------------|--|---------------------|---------------|
|                       |  | Energy Efficiency   | Environmental |
| Walls                 | Solid brick, as built, no insulation (assumed) | Very poor           | Very poor     |
| Roof                  | Pitched, no insulation (assumed)               | Very poor           | Very poor     |
| Floor                 | (other premises below)                         | -                   | -             |
| Windows               | Single glazed                                  | Very poor           | Very poor     |
| Main heating          | Boiler and radiators, mains gas                | Very good           | Very good     |
| Main heating controls | Programmer, no room thermostat                 | Very poor           | Very poor     |
| Secondary heating     | None   | -                   | -             |
| Hot water             | From main system                               | Very good           | Very good     |
| Lighting              | Low energy lighting in 50% of fixed outlets    | Good                | Good          |

Current energy efficiency rating **D 55**

Current environmental impact (CO<sub>2</sub>) rating **E 48**

## Low and zero carbon energy sources

None

## Recommendations

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table.

| Lower cost measures (up to £500)            | Typical savings per year | Performance ratings after improvement |                      |
|---|--------------------------|---------------------------------------|----------------------|
|   |                          | Energy efficiency                     | Environmental impact |
| 1 Low energy lighting for all fixed outlets | £11                      | D 55                                  | E 48                 |
| 2 Upgrade heating controls                  | £38                      | D 58                                  | E 51                 |
| Total                                       | £49                      |                                       |                      |

Potential energy efficiency rating D 58

Potential environmental impact (CO<sub>2</sub>) rating E 51

## Further measures to achieve even higher standards

The further measures listed below should be considered in addition to those already specified if aiming for the highest possible standards for this home. However you should check the conditions in any covenants, planning conditions, warranties or sale contracts.

|   |      |      |      |
|---|------|------|------|
| 3 Replace single glazed windows with low-E double glazing | £26  | D 60 | E 53 |
| 4 50 mm internal or external wall insulation              | £111 | D 68 | D 62 |

Enhanced energy efficiency rating D 68

Enhanced environmental impact (CO<sub>2</sub>) rating D 62

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in (CO<sub>2</sub>) emissions.

## About the cost effective measures to improve this home's performance ratings

If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

### Lower cost measures (typically up to £500 each)

These measures are relatively inexpensive to install and are worth tackling first. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

#### 1 Low energy lighting

Replacement of traditional light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy light fittings when redecorating; contact the Lighting Association for your nearest stockist of Domestic Energy Efficient Lighting Scheme fittings.

#### 2 Heating controls (room thermostat and thermostatic radiator valves)

A room thermostat will increase the efficiency of the heating system by enabling the boiler to switch off when no heat is required; this will reduce the amount of energy used and lower fuel bills. Thermostatic radiator valves should also be installed, to allow the temperature of each room to be controlled to suit individual needs, adding to comfort and reducing heating bills provided internal doors are kept closed. For example, they can be set to be warmer in the living room and bathroom than in the bedrooms. Ask a competent heating engineer to install thermostatic radiator valves and a fully pumped system with the pump and the boiler turned off by the room thermostat. Thermostatic radiator valves should be fitted to every radiator except for the radiator in the same room as the room thermostat. Remember the room thermostat is needed as well as the thermostatic radiator valves, to enable the boiler to switch off when no heat is required.

## About the further measures to achieve even higher standards

Further measures that could deliver even higher standards for this home. You should check the conditions in any covenants, planning conditions, warranties or sale contracts before undertaking any of these measures. If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

#### 3 Double glazing

Double glazing is the term given to a system where two panes of glass are made up into a sealed unit. Replacing existing single-glazed windows with double glazing will improve comfort in the home by reducing draughts and cold spots near windows. Double-glazed windows may also reduce noise, improve security and combat problems with condensation. Building Regulations apply to this work, so either use a contractor who is registered with a competent persons scheme<sup>1</sup> or obtain advice from your local authority building control department.

#### 4 Internal or external wall insulation

Solid wall insulation involves adding a layer of insulation to either the inside or the outside surface of the external walls, which reduces heat loss and lowers fuel bills. As it is more expensive than cavity wall insulation it is only recommended for walls without a cavity, or where for technical reasons a cavity cannot be filled. Internal insulation, known as dry-lining, is where a layer of insulation is fixed to the inside surface of external walls; this type of insulation is best applied when rooms require redecorating and can be installed by a competent DIY enthusiast. External solid wall insulation is the application of an insulant and a weather-protective finish to the outside of the wall. This may improve the look of the home, particularly where existing brickwork or rendering is poor, and will provide long-lasting weather protection. Further information can be obtained from the National Insulation Association ([www.nationalinsulationassociation.org.uk](http://www.nationalinsulationassociation.org.uk)). It should be noted that planning permission might be required.

<sup>1</sup>For information on competent persons schemes enter "existing competent person schemes" into an internet search engine or contact your local Energy Saving Trust advice centre on 0800 512 012.

## What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO<sub>2</sub> emissions.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.
